Here are the two most important rules for tuning: -- A hole will give a higher note if it is placed closer to the mouthhole. It will give a lower note if placed farther away. -- A hole will give a higher note if made larger. It will give a lower note if smaller. These rules mean you can "raise" a note by enlarging the hole or by placing the hole closer to the mouthhole. You can "lower" the note by using a smaller hole or by placing the hole farther from the mouthhole. It also means you can change the hole size and its placement without changing the note. A larger hole could be placed farther from the mouthhole, or a smaller hole placed closer to the mouthhole.

The Amateur Flautist Hugh Evans 2014-10-28
Many people learn the flute. Most give it up as an adult because they cannot easily find anyone to play with, and a lack of practice makes it less enjoyable to play. This book is aimed at helping such people. The first chapter diagnoses why most amateur flautists give up playing, and sets out a number of remedies. The most important is finding other musicians with whom to play, whether in an orchestra, or more importantly, in chamber groups. The author explores how you might set about finding players for chamber music, and how you might set about finding the music itself. The second chapter gives guidance about the music for all the principal combinations of chamber groups which involve the flute. The most significant ones are flute and piano, two to four flutes, trio sonatas with another melody instrument and piano, and the wind quartet. The author describes the principal works for each of these groups, which are fun and manageable for amateurs,
rather than listing everything that is available. Listed are the significant works that are available for free on the internet. The third chapter suggests a short practice regime to counteract the deficiencies in the playing of most amateur flautists, which are poor tone and tuning. Practicing half an hour a few times a week should do the trick.

**Psychology of Music** Carl E. Seashore 2012-09-06 Between the physical world of vibration, as measured by apparatus, and the world of consciously heard music there is a third area of investigation. Our auditory apparatus and/or mind separates different instruments and tones, hears some vibrations but not others, adds tones to fill out the sound spectrum, etc. This middle ground is the province of the psychology of music, a subject about which even many physical scientists know little. This introduction, by the developer of the Seashore test of musical ability, is a thorough survey of this field, the standard book for psychologists specializing in the area, for the school, and for interested musicologists. It opens with the musical mind and with a series of chapters on music as a medium: vibrato, pitch, loudness, duration, timbre, tone, consonance, volume, and rhythm, dealing with each from the special point of view of the role of psychology. It then moves to such factors as learning, imagining, and thinking in music; the nature of musical feeling; the relative sound patterns of specific instruments and the human voice; measures of musical talent; inheritance of musical ability; primitive music; the development of musical skills; and musical aesthetics. This wealth of material is supplemented with dozens of oscillograms
and other sound-pattern charts recorded from actual play and singing by Jeritza, Caruso, Paderewski, Szigeti, Rethberg, Menuhin, Martinelli, and other artists. An appendix cites two attitudes toward the evaluation of musical talent and over 200 bibliographic references.

Born in Switzerland, he has been influenced by the teachings of Emil Niosi (pupil of the great Georges Barrère), Hugo Haldemann, Jean-Pierre Rampal and Aurèle Nicolet. From 1977 to 2005 he also acted as first flutist in the Municipal Symphony Orchestra of São Paulo, Brazil. Since his retirement from this orchestra he is pursuing a career as composer.
