Tobacco Industry and Smoking Fred C. Pampel, 2009 Praise for the previous edition:

Regulation of Tobacco Products United States. Congress. House. Committee on Energy and Commerce. Subcommittee on Health and the Environment, 1995

The Scientific Basis of Tobacco Product Regulation World Health Organization, 2007 This report presents the conclusions and recommendations of the third meeting of the WHO Study Group on Tobacco Product Regulation, which reviewed four background papers specially commissioned for the meeting on the following topics: i) the contents and design features of tobacco products: their relationship to dependence potential and consumer appeal; ii) candy-flavoured tobacco products: research needs and regulatory recommendations; iii) biomarkers of tobacco exposure and of tobacco smoke-induced health effects; and iv) setting maximum limits of toxic constituents in cigarette smoke.

Merchants of Doubt Naomi Oreskes, Erik M. Conway, 2011-10-03 The U.S. scientific community has long led the world in research on such areas as public health, environmental science, and issues affecting quality of life. These scientists have produced landmark studies on the dangers of DDT, tobacco smoke, acid rain, and global warming. But at the same time, a small yet potent subset of this community leads the world in vehement denial of these dangers. *Merchants of Doubt* tells the story of how a loose-knit group of high-level scientists and scientific advisers, with deep connections in politics and industry, ran effective campaigns to mislead the public and deny well-established scientific knowledge over four decades. Remarkably, the same individuals surface repeatedly—some of the same figures who have claimed that the science of global warming is not settled denied the truth of studies linking smoking to lung cancer, coal smoke to acid rain, and CFCs to the ozone hole. Doubt is our product, wrote one tobacco executive. These experts supplied it. Naomi Oreskes and Erik M. Conway, historians of science, roll back the rug on this dark corner of the American scientific community, showing how ideology and corporate interests, aided by a too-compliant media, have skewed public understanding of some of the most pressing issues of our era.

Golden Holocaust Robert N. Proctor, 2012-02-28 The cigarette is the deadliest artifact in the history of human civilization. It is also one of the most beguiling, thanks to more than a century of manipulation at the hands of tobacco industry chemists.

In *Golden Holocaust*, Robert N. Proctor draws on reams of formerly-secret industry documents to explore how the cigarette came to be the most widely-used drug on the planet, with six trillion sticks sold per year. He paints a harrowing picture of tobacco manufacturers conspiring to block the recognition of tobacco-cancer hazards, even as they ensnare legions of scientists and politicians in a web of denial. Proctor tells heretofore untold stories of fraud and subterfuge, and he makes the strongest case to date for a simple yet ambitious remedy: a ban on the manufacture and sale of cigarettes.

The Cigarette Papers Stanton A. Glantz,1996 These documents provide a shocking inside account of the activities of one tobacco company, Brown & Williamson, and its multinational parent, British American Tobacco, over more than thirty years.

The Cigarette Century Allan Brandt,2009-01-06 From agriculture to big business, from medicine to politics, *The Cigarette Century* is the definitive account of how smoking came to be so deeply implicated in our culture, science, policy, and law. No product has been so heavily promoted or has become so deeply entrenched in American consciousness. *The Cigarette Century* shows in striking detail how one ephemeral (and largely useless) product came to play such a dominant role in so many aspects of our lives—and deaths.

Tobacco Peter Boyle,2010-08-19 Tobacco is ranked as one of the major public health disasters of modern times. This book pulls together the science of tobacco-related diseases with the policy of tobacco control to offer a comprehensive preventive medicine/public health approach.

WHO Report on the Global Tobacco Epidemic, 2013 World Health Organization,2013 The continued success in global tobacco control is detailed in this year's WHO Report on the Global Tobacco Epidemic, 2013. The fourth in the series, this year's report presents the status of the MPOWER measures, with country-specific data updated and aggregated through 2012. In addition, the report provides a special focus on legislation to ban tobacco advertising, promotion and sponsorship (TAPS) in WHO Member States and an in-depth analyses of TAPS bans were performed, allowing for a more detailed understanding of progress and future challenges in this area.--Website summary.

The Cigarette Century Allan M. Brandt,2007-03-13 An expose of the tobacco industry discusses the cultural, political, scientific, and legal aspects of cigarette smoking in modern America.

Growing Up Tobacco Free Institute of Medicine,Committee on Preventing Nicotine Addiction in Children and Youths,1994-02-01 Tobacco use kills more people than any other addiction and we know that addiction starts in childhood and youth. We all agree that youths should not smoke, but how can this be accomplished? What prevention messages will

they find compelling? What effect does tobacco advertising—more than \$10 million worth every day—have on youths? Can we responsibly and effectively restrict their access to tobacco products? These questions and more are addressed in *Growing Up Tobacco Free*, prepared by the Institute of Medicine to help everyone understand the troubling issues surrounding youths and tobacco use. *Growing Up Tobacco Free* provides a readable explanation of nicotine's effects and the process of addiction, and documents the search for an effective approach to preventing the use of cigarettes, chewing and spitting tobacco, and snuff by children and youths. It covers the results of recent initiatives to limit young people's access to tobacco and discusses approaches to controls or bans on tobacco sales, price sensitivity among adolescents, and arguments for and against taxation as a prevention strategy for tobacco use. The controversial area of tobacco advertising is thoroughly examined. With clear guidelines for public action, everyone can benefit by reading and acting on the messages in this comprehensive and compelling book.

Clearing the Smoke Institute of Medicine, Board on Health Promotion and Disease Prevention, Committee to Assess the Science Base for Tobacco Harm Reduction, 2001-10-17 Despite overwhelming evidence of tobacco's harmful effects and pressure from anti-smoking advocates, current surveys show that about one-quarter of all adults in the United States are smokers. This audience is the target for a wave of tobacco products and pharmaceuticals that claim to preserve tobacco pleasure while reducing its toxic effects. *Clearing the Smoke* addresses the problems in evaluating whether such products actually do reduce the health risks of tobacco use. Within the context of regulating such products, the committee explores key questions: Does the use of such products decrease exposure to harmful substances in tobacco? Is decreased exposure associated with decreased harm to health? Are there surrogate indicators of harm that could be measured quickly enough for regulation of these products? What are the public health implications? This book looks at the types of products that could reduce harm and reviews the available evidence for their impact on various forms of cancer and other major ailments. It also recommends approaches to governing these products and tracking their public health effects. With an attitude of healthy skepticism, *Clearing the Smoke* will be important to health policy makers, public health officials, medical practitioners, manufacturers and marketers of reduced-harm tobacco products, and anyone trying to sort through product claims.

Tobacco or Health? Knut-Olaf Haustein, 2013-03-14 Science tends to generalize, and generalizations mean simplifications And generalizations are also more satisfying to the mind than details. Of course, details and generalizations must be in proper balance: Generalizations can be reached only from details, while it is the generalization which gives value and interest to the detail.' . . . (A. Szent-Gyorgy, *Science* 1964) The first edition of this book, published in German as *Tabak abhangigkeit* in 2001, was prompted by the fact that no single volume was available in Germany or elsewhere summarising the adverse repercussions of cigarette smoking on human health. As far as my own research was able to ascertain, the last

comprehensive work dealing with this subject was written in Germany by the Dresden internist, F. Lickint, whose *Tabak und Organismus* was published in 1939 by the Hippokrates-Verlag. All subsequent monographs in this field have tended to focus on detailed aspects, and there has been no shortage of publications on subjects such as how smokers can quit smoking, healthy eating for smokers etc. Friends and colleagues abroad have urged me to prepare an English language version of *Tabakabhängigkeit*. In gladly complying with this suggestion, I have intentionally prepared an updated and slightly enlarged new edition, taking account of the rapidly proliferating literature on the subject up to the start of 2002. The harmful sequelae of smoking are played down by politicians in many industrialised countries, including Germany.

The tobacco industry in the United States Meyer Jacobstein, 1968

Tobacco Control Policy Kenneth E. Warner, 2006-10-13 Required reading for anyone wishing to be conversant with tobacco control policy, the book is edited by Kenneth E. Warner—dean of the School of Public Health at the University of Michigan and a leading tobacco policy researcher—who leads with an overview of the field. Warner’s overview is supported by reprints of some of the field’s most significant articles, written by leading scholars and practitioners. The topics discussed are: Taxation and Price Control Indoor Air Laws Advertising, Ad Bans, and Counteradvertising Possession, Use, and Purchase (PUP) Laws and Sales to Minors Cessation Policy Comprehensive State Laws

Ending the Tobacco Problem Institute of Medicine, Board on Population Health and Public Health Practice, Committee on Reducing Tobacco Use: Strategies, Barriers, and Consequences, 2007-10-27 The nation has made tremendous progress in reducing tobacco use during the past 40 years. Despite extensive knowledge about successful interventions, however, approximately one-quarter of American adults still smoke. Tobacco-related illnesses and death place a huge burden on our society. *Ending the Tobacco Problem* generates a blueprint for the nation in the struggle to reduce tobacco use. The report reviews effective prevention and treatment interventions and considers a set of new tobacco control policies for adoption by federal and state governments. Carefully constructed with two distinct parts, the book first provides background information on the history and nature of tobacco use, developing the context for the policy blueprint proposed in the second half of the report. The report documents the extraordinary growth of tobacco use during the first half of the 20th century as well as its subsequent reversal in the mid-1960s (in the wake of findings from the Surgeon General). It also reviews the addictive properties of nicotine, delving into the factors that make it so difficult for people to quit and examines recent trends in tobacco use. In addition, an overview of the development of governmental and nongovernmental tobacco control efforts is provided. After reviewing the ethical grounding of tobacco control, the second half of the book sets forth to present a blueprint for ending the tobacco problem. The book offers broad-reaching recommendations targeting federal, state, local, nonprofit and for-profit entities. This book also identifies the benefits to society when fully implementing effective tobacco control interventions and policies.

Understanding the U.S. Illicit Tobacco Market National Research Council, Committee on the Illicit Tobacco Market: Collection and Analysis of the International Experience, 2015-04-30 Tobacco use has declined because of measures such as high taxes on tobacco products and bans on advertising, but worldwide there are still more than one billion people who regularly use tobacco, including many who purchase products illicitly. By contrast to many other commodities, taxes comprise a substantial portion of the retail price of cigarettes in the United States and most other nations. Large tax differentials between jurisdictions increase incentives for participation in existing illicit tobacco markets. In the United States, the illicit tobacco market consists mostly of bootlegging from low-tax states to high-tax states and is less affected by large-scale smuggling or illegal production as in other countries. In the future, nonprice regulation of cigarettes - such as product design, formulation, and packaging - could in principle, contribute to the development of new types of illicit tobacco markets. *Understanding the U.S. Illicit Tobacco Market* reviews the nature of illicit tobacco markets, evidence for policy effects, and variations among different countries with a focus on implications for the United States. This report estimates the portion of the total U.S. tobacco market represented by illicit sales has grown in recent years and is now between 8.5 percent and 21 percent. This represents between 1.24 to 2.91 billion packs of cigarettes annually and between \$2.95 billion and \$6.92 billion in lost gross state and local tax revenues. *Understanding the U.S. Illicit Tobacco Market* describes the complex system associated with illicit tobacco use by exploring some of the key features of that market - the cigarette supply chain, illicit procurement schemes, the major actors in the illicit trade, and the characteristics of users of illicit tobacco. This report draws on domestic and international experiences with the illicit tobacco trade to identify a range of possible policy and enforcement interventions by the U.S. federal government and/or states and localities.
